Laboratory Report

Laboratory #: 168506 **Call Name:** Yogi

Order #: 82532 Registered Name: Red Forrest It Ain't Over Til Its Over

Ordered By: Laura Diebold Breed: Australian Shepherd

 Ordered:
 July 1, 2020
 Sex:
 Male

 Received:
 July 21, 2020
 DOB:
 Aug. 2019

 Reported:
 Aug. 4, 2020
 Registration #:
 E212544

Results:

Gene	Genotype	Interpretation
NHEJ1	WT/WT	Normal (clear)
CNGB3	WT/WT	Normal (clear)
SLC37A2	WT/WT	Normal (clear)
SOD1	WT/WT	Normal (clear)
HSF4	WT/WT	Normal (clear)
SLC2A9	WT/WT	Normal (clear)
AMN	WT/WT	Normal (clear)
ABCB1	WT/M	Carrier (At-Risk)
BEST1	WT/WT	Normal (clear)
CLN6	WT/WT	Normal (clear)
PRCD	WT/WT	Normal (clear)
	NHEJ1 CNGB3 SLC37A2 SOD1 HSF4 SLC2A9 AMN ABCB1 BEST1 CLN6	NHEJ1 WT/WT CNGB3 WT/WT SLC37A2 WT/WT SOD1 WT/WT HSF4 WT/WT SLC2A9 WT/WT AMN WT/WT ABCB1 WT/M BEST1 WT/WT CLN6 WT/WT

WT, wild type (normal); M, mutant; Y, Y chromosome (male)

Interpretation:

Molecular genetic analysis was performed for 11 specific mutations reported to be associated with disease in dogs. We identified two normal copies of the DNA sequences in 10 of the mutations tested. Thus, this dog is not at an increased risk for the diseases associated with these 10 mutations. However, we identified one normal copy and one mutant copy of the DNA sequences for *ABCB1*. Thus, this dog is a carrier of (and may be at risk for) Multidrug Resistance 1.

Recommendations:

Multidrug Resistance 1 is inherited in an autosomal incomplete dominant manner in dogs. Based on this, and the fact that this dog showed a mutation in one copy of the *ABCB1* gene, this dog is a carrier of Multidrug Resistance 1 and at a low risk of developing neurological disease when given certain medications. Dogs affected with this disease lack the ability to remove certain drugs and toxins from the central nervous system putting them at risk for developing neurologic symptoms that could range from tremors, excess salivation, anorexia, and blindness to coma and even death. Though adverse reactions to certain drugs are most commonly seen in dogs having two copies of the mutated gene, carrier dogs can also experience drug sensitivities and dosages need to be adjusted accordingly. Thus, dogs that have one or two mutant copies of the gene are considered at risk for adverse drug reactions. Your veterinarian should be notified that this dog is a carrier for Multidrug Resistance 1 prior to

administration of any medications. When carriers of this mutation are bred with another dog that also is a carrier of the same mutation, there is risk of having affected pups. For each pup that is born to this pairing, there is a 25% chance that the puppy will inherit two copies of the mutation and a 50% chance that the puppy will inherit one copy of the mutation and, in either case, may be susceptible to having adverse drug reactions. Dogs related to this dog have an increased risk to be affected by or carry the mutated gene. Additional testing for this mutation is indicated for related dogs.

Paw Print Genetics[®] has genetic counseling available to you at no additional charge to answer any questions about these test results, their implications and potential outcomes in breeding this dog.

Medical Director

Robert D. Westra, MS, DVM Assistant Medical Director

Normal results do not exclude inherited mutations not tested in these or other genes that may cause medical problems or may be passed on to offspring. These tests were developed and their performance determined by Paw Print Genetics. This laboratory has established and verified the tests' accuracy and precision. Because all tests performed are DNA-based, rare genomic variations may interfere with the performance of some tests producing false results. If you think these results are in error, please contact the laboratory immediately for further evaluation. In the event of a valid dispute of results claim, Paw Print Genetics will do its best to resolve such a claim to the customer's satisfaction. If no resolution is possible after investigation by Paw Print Genetics with the cooperation of the customer, the extent of the customer's sole remedy is a refund of the fee paid. In no event shall Paw Print Genetics be liable for indirect, consequential or incidental damages of any kind. Any claim must be asserted within 60 days of the report of the test results.
